

CATCH® ORANGE NITRILE POWDER FREE GLOVES

Catch Orange Nitrile Powder Free Gloves possess a heavy textured surface that provides an impeccable grip. With an average 9 mil thick finger thickness, this glove offers extra protection and stronger resistance to wear and tear.

The vibrant orange color increases visibility at the work place and enhances safety. Catch nitrile gloves are favored by aviation, mechanic, marine, plumbing and manufacturing industries because of their incredibly strong grip and vivid bright color.

The extra thickness makes these gloves more durable when working on “rougher” jobs while keeping hands safe and protected against harsh chemicals, solvents and paints.
